

# CO<sub>2</sub> JET

The CO<sub>2</sub> jet is a cryogenic effect system capable of making plumes of cryo fog up to 20 feet high. Incorporating Sigma's own cryo valve #CHP-V, the effect is very reliable and repeatable. A standard plume nozzle is included with each system and a variety of optional nozzles are available. Stainless steel and brass construction yield a very rugged device. The CO<sub>2</sub> jet system can be used with high pressure liquid CO<sub>2</sub> tanks or refrigerated liquid dewar tanks to add to its versatility.

- 6" x 5" x 5" (without nozzle)
- 120 vac, 1.2 amps
- 0 - 2500 psi
- Weight: 8 pounds
